# EVIDENCE TO ACTION: INFORMING BIOSECURITY DECISIONS IN AN ERA OF EMERGING BIOTECHNOLOGY

Rapid advances in emerging biotechnologies bring both promise and risk. This lunch session, co-hosted by IBBIS, CEPI, and RAND, will explore these changes in risk and how current research at these organizations seeks to understand them. Presenters will highlight three complementary initiatives: RAND's *AI-Enabled Biological Tool Risk Index Observatory*, CEPI's *Biosecurity Policy*, and IBBIS' *Global DNA Synthesis Report*. Please join us for a discussion of biological risk, the impacts of technology, and the future for biosecurity and biosafety. Our goal is to explore how these tools can collectively strengthen global approaches to biological risk assessment and responsible innovation.

## Speakers:

Claire Standley, CEPI

Mayra Ameneiros, IBBIS

Sana Zakaria, RAND
